

Digistor™ Replication Services – IT Production Systems Continuity

Business continuity is an important consideration for all organizations. And it's no longer just for the largest organizations. For many small to medium sized businesses, the impact of having a major interruption to its business because of a computer system failure or disaster is significant. Industry statistics indicate that 43% of companies experiencing disasters never reopen and 29% close within two years. Clearly, protecting your business and your data from the worst case scenario is critical.

Digistor™ Replication Services provide data and critical system backup to your primary business systems. In case there is an interruption of service (including a disaster), Virtual Management Technologies can return you to operation quickly and efficiently.

Here is how Digistor Replication Services work:

- VMT defines the replication topology — the relationship between critical business applications and data.
- VMT captures an image of your critical business applications and associated data and installs it on a server at our data center. Application examples might be Microsoft Exchange or a Payroll application.
- Applications are maintained in close synchronization with your onsite computer system. Some latency is to be expected with email applications.
- Data is updated weekly (or sooner) and incremental data changes are streamed via the Internet nightly.
- In case of business interruption, the dedicated server(s) is deployed to take over processing functions.
- Redeployment of the Digistor Replication Server can occur by re-routing traffic to the Replication Server or moving the Replication Server to your location. A variety of options are available based on latency window requirements.

The advantages that Digistor Replication Services can offer your organization are:

- Provides a disaster tolerant environment.
- Speeds recovery time of key systems in case of outage or disaster.
- Lowers the impact of lost data by keeping a current data store image available offsite.
- Manages business continuity cost effectively and efficiently.

To learn more about how VMT's Digistor Replication Services can help your organization become more disaster tolerant and maintain business continuity, please call 770-751-1110 ext. 111. Or, visit our web site at www.VMTech.net.
