

FOR IMMEDIATE RELEASE

Virtual Management Technologies Achieves PCI DSS Certification

Alpharetta, GA, February 8, 2012 – Virtual Management Technologies (VMT), a leading provider of IT infrastructure management services, has announced compliance with the Payment Card Industry Data Security Standard (PCI DSS) certification for service providers. PCI DSS version 2.0 is the global data security standard that any business of any size must adhere to in order to accept payment cards, and to store, process, and/or transmit cardholder data.

“As a Managed Services Provider (MSP), VMT works closely with organizations that must comply with PCI DSS standards in their business,” explains Don Campbell, President and CEO of VMT. “While it is ultimately the responsibility of each company to be compliant with PCI DSS security standards, we help our customers reduce the cost of compliance by ensuring that certified security standards are in place in our data center and through our infrastructure management process when hosting an organization’s business applications. From the entry into our data center network, we ensure that all security standards are in place.”

VMT’s managed services processes follows the framework established by the PCI Security Standards Council. This framework calls for prevention, detection and appropriate reaction to security incidents. The framework includes 12 key control objectives ranging from building and maintaining a secure network and protecting cardholder data, to implementing strong access control measures and regularly monitoring and testing the network. VMT is also SAS 70 certified.

“We also work closely with our customer’s QSA (Qualified Security Assessor) to help certify all aspects of their infrastructure for PCI DSS compliance,” noted Campbell. “The QSAs work with the organization to assess existing security standards, remediate issues and report on the overall findings.”

About VMT

Virtual Management Technologies (VMT) provides advanced data center management for organizations of all sizes. The company’s services help organizations manage their complex information system infrastructure including: servers, networks, VMware, Exchange email systems, security, virus management and spam, data backup and recovery, database administration and tuning, and desktop management. VMT is a Microsoft Gold Partner and a VMware Premier Partner. For more information, please contact Virtual Management Technologies at 770-751-1110, or visit the VMT web site at www.vmtech.net.
